

RSE Asia Australia Unconference Prospectus

Building the Research Software Engineer community
across Asia and Australia
September 2023

Key Partners from 2022

Australian Research Data Commons

2022 Accessibility Partner

Current Community

The RSE Association of Australia and New Zealand (RSE-AUNZ) currently has 414 members. The RSE Asia Association has recently been established and has 70 members.

About the Unconference

This is the second online Research Software Engineer (RSE) Asia Australia Unconference. This gives you a unique opportunity to reach an emerging international community of RSEs.

This joint partnership will allow you to reach an international multi-disciplinary audience of RSEs that are critical to underpinning the reproducibility and accuracy of research now and in the future.

During the 2022 Unconference:

- 141 participants were registered for the unconference,
- 17 different community-led sessions, and
- a maximum of 77 participants in one session.

Partnership Opportunities

By partnering with us, you will be helping to raise awareness not only of your organisation, but of the importance and value of RSEs as a community and as individuals. This would be especially advantageous for organisations wanting to target a technology-savvy, multi-disciplinary audience that is relied on to provide advice for technology decisions.

Key partnerships are available for an investment of \$3,000 AUD and the Allied partnerships are available for an investment of \$1,000 AUD.

There is also an Accessibility Partner option. This is based on providing accessibility to participants and is a flexible package that starts at \$2000 AUD.

Offerings	Key	Allied

Accessibility for the 2022 Unconference

In the 2022 unconference we were able to improve the accessibility of the event. We made it more accessible than a normal event by making the event online, the tickets were relatively cheap with scholarships available, and used Zoom which was recommended for being more accessible.

We provided two accessibility micro-grants, and an accessibility report was commissioned to help us be accountable for the accessibility of the event. We did relatively well given the circumstances, but we do need to improve the live captions, increasing the uptake of the micro-grants, and speaker awareness.

Partnership Benefits

By partnering with us, you will help to build on the foundations that we created in the 2022 event, as well as setting the precedent of having Accessibility Partnerships and auditing on accessibility reports as standard for events.

This partnership would contribute to:

- identifying an individual to focus on improving accessibility,
- benchmark the accessibility report with an external audit,
- provide accessibility micro-grants, and
- provide live captions for all keynote speakers.
